SECTION V - DIAGNOSTIC TESTING		
Note: VA requires diagnostic confirmation for both the initial diagnosis and any relapse or recurrence. Certain infectious diseases require specific testing methods to confirm recurrence of active infection. If testing has been performed and reflects Veteran's current condition, repeat testing is not required. (For VA purposes, relapse is defined as a full return of a disease or the signs and symptoms of a disease after a period of improvement and recurrence refers to another separate disease episode after a full recovery has been attained).		
5A. For visceral leishmaniasis, miliary tuberculosis or nontuberculosis mycobacterium infection, please state if the recurrence of active infection is confirmed by:		
Culture		
Histopathology		
Other diagnostic laboratory testing		
Please provide type of test or procedure, date and results (brief summary):		
5B. For malaria, please state if the initial diagnosis or relapse is confirmed by:		
Identification of the malarial parasites in blood smears		
Identification of the malarial parasites in other specific diagnostic laboratory tests, such as antigen detection, immunologic (immunochromatographic) tests, or molecular testing such as polymerase chain reaction tests		
Please provide type of test or procedure, date and results (brief summary):		
5C. For brucellosis, please state if the initial diagnosis or recurrence of active infection is confirmed by:		
Culture		
Serologic testing		
Please provide type of test or procedure, date and results (brief summary):		
5D. For melioidosis, please state if the initial diagnosis and any relapse or chronic activity of infection is confirmed by:
