

Neurological Conditions and Convulsive Disorders

4.120	Evaluations by comparison	4.120-1
4.121	Identification of epilepsy	4.121-1
4.122	Psychomotor epilepsy	4.122-1
4.123	Neuritis, cranial or peripheral	4.123-1
4.124	Neuralgia, cranial or peripheral	4.124-1
4.124a	Schedule of ratings—neurological conditions and convulsive disorders	4.124a-1

§4.120 Evaluations by comparison.

Disability in this field is ordinarily to be rated in proportion to the impairment of motor, sensory or mental function. Consider especially psychotic manifestations, complete or partial loss of use of one or more extremities, speech disturbances, impairment of vision, disturbances of gait, tremors, visceral manifestations, injury to the skull, etc. In rating disability from the conditions in the preceding sentence refer to the appropriate schedule. In rating peripheral nerve injuries and their residuals, attention should be given to the site and character of the injury, the relative impairment in motor function, trophic changes, or sensory disturbances.

§4.121 Identification of epilepsy.

When there is doubt as to the true nature of epileptiform attacks, neurological observation in a hospital adequate to make such a study is necessary. To warrant a rating for epilepsy, the seizures must be witnessed or verified at some time by a physician. As to frequency, competent, consistent lay testimony emphasizing convulsive and immediate post-convulsive characteristics may be accepted. The frequency of seizures should be ascertained under the ordinary conditions of life (while not hospitalized).
